TEST CASES

1)

IOT hosting a server
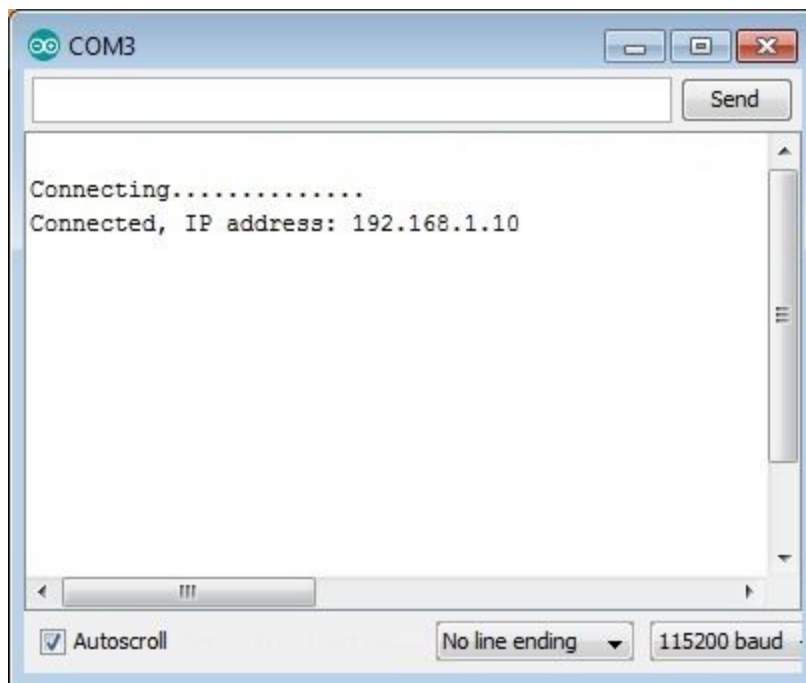

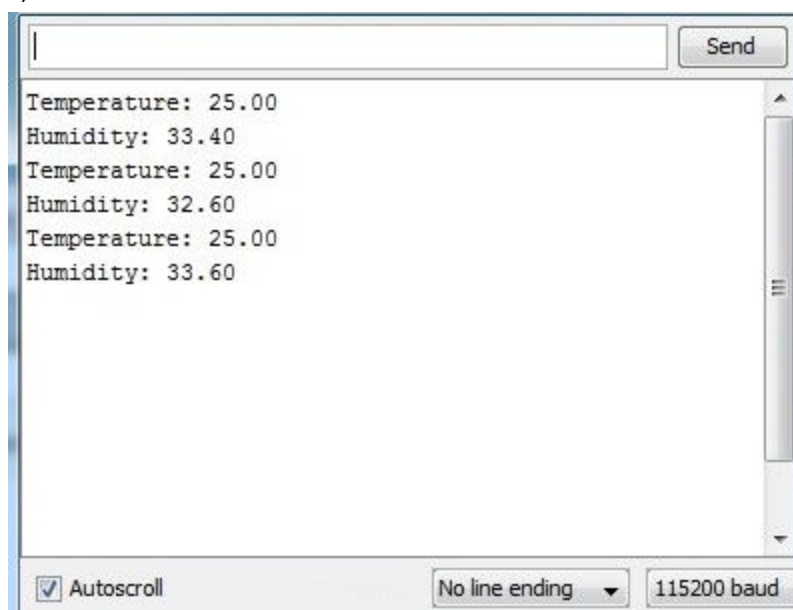

2)

Webpage dispalying data hosted on a server by the IOT. Thus making sure that the data is being successfully transmitted over the hosted network.

3)

Serial Monitor Output of a esp8266 module connecting to a hotspot created by another esp8266 module.

4)

Serial monitor displaying the readings of DHT11 module connected to the arduino.

Further test cases might be added as the work progresses.
